APPLICATION INSTRUCTIONS

These instructions are not intended to show product recommendations for specific service. They are issued as an aid in determining correct surface preparation, mixing instructions and application procedure. It is assumed that the proper product recommendations have been made. These instructions should be followed closely to obtain the maximum service from the materials.

TOOLING & CLEANING
Tooling is recommended with Spectrem 800 immediately after application to insure firm, intimate contact with the joint interface. Sealant should be recessed 9-12mm below pavement surface. Cleaning can be accomplished with solvents such as IPA, Xylo, Toluol or MEK while sealant is in uncured state.

JOINT BACKING
Closed cell polyethylene backer rods are preferred as joint backing to control depth of sealant bead. Where depth of joint will prevent use of joint backing, an adhesive backed polyethylene tape must be installed to prevent three side adhesion. Joint backing must be dry at time of sealant application.

APPLICATION
Spectrem 800 are easy to apply with conventional caulking or highway sealing equipment. Fill joint while maintaining recess and tool. At 23.9°C, 50% RH a durable skin will form within 60 minutes.

MAINTENANCE
Damaged sealant can be repaired. Consult your Tremco Distributor or Representative for repair procedures.

AVAILABILITY
From StonCor Africa.

WARRANTY
Tremco warrants its sealants to be free of defects in material, but makes no warranty as to appearance of colour. Since method of application and on-site conditions are beyond our control and can affect performance, Tremco makes no other warranty, expressed or implied, including warranties of MERCHANTABILITY and FITNESS FOR A PARTICULAR PURPOSE, with respect to sealants. Tremco’s sole obligation shall be at, its option, to replace, or to refund the purchase price of the quantity of sealant proved to be defective and Tremco shall not be liable for any loss or damage.
